THE UNIVERSE HAS BEEN SPEAKING ALL ALONG

We Just Need the Right Receiver

TSC 2026, San Diego · Poster #518 · Tuesday 13 Oct, 7:30 pm, Mission Bay Room

▸ THE BRAIN IS A RECEIVER

The universe is continuously broadcasting information. Just as Jagadish Chandra Bose (1895) and Guglielmo Marconi demonstrated that modulated electromagnetic waves travel through vacuum without any physical medium—allowing a radio tuner to capture sound from thin air—the human brain and animal nervous systems act as tuned receivers, picking up non-electromagnetic signals and translating them into thoughts, images, and speech.

We are taking the next logical step beyond Marconi: from EM radio waves to the sub-quantum, non-EM field — what Jain physics calls Bhasha Vargana / Mano Vargana.

▸ FOUR FORMS OF SOUND / KNOWING

STAGE	MEDIUM	DESCRIPTION
VAIKHARI	Air ~330 m/s	Audible spoken sound. Physical acoustic waves through air. The grossest form.
MADHYAMA	EM waves, vacuum	Internal mental speech; modulated EM waves. Like radio—no physical medium needed. Travels through vacuum (Bose/Marconi layer).
PASHYANTI	Non-EM field, no distance decay	Visual sound & cumulative memory. Non-verbal, intuitive, arrives whole. Unlike EM waves, Pashyanti does NOT dissipate with distance. Mapped to Jain Mano Vargana (dark matter sector). → Our experimental target.
PARA	Unmanifested substrate	The subtlest source field. Ultimate origin of all thought and information. Beyond measurement—the cosmic broadcasting station.

▸ MAKE THE RECEIVER BETTER: C = 1/K

The Noise Formula: Coupling capacity (C) to the Pashyanti/Mano Vargana field is inversely proportional to internal noise (K). Reducing metabolic, verbal, and mental noise — through practices like Japa, Tapa, Dhyana — opens clearer reception of subtle signals. Jain traditions mapped this long before modern neuroscience.

C = 1/K

Shannon-Hartley parallel: $C = B \log_2(1 + S/N)$ More noise → less channel capacity.

▸ DARK MATTER: THE PHYSICAL FIELD OF MIND

Modern physics shows ~27% of the universe consists of Dark Matter—interacting gravitationally but producing zero electromagnetic signal. (Note: we set aside Dark Energy ~68%, which drives space expansion, to focus strictly on Dark Matter.)

Jain Physical Field	Subtle physical sector: Mano Vargana is subtle matter, not abstract consciousness—making it falsifiable and empirically testable.
Unique Testability	Jain strict dualism separates soul (Jiva) from matter (Pudgala). Mano Vargana belongs to Pudgala—it can be measured, not just experienced.

▸ NEXT-GENERATION INSTRUMENTATION

INSTRUMENT	WHAT IT DETECTS / WHY
SQUID Magnetometer	Ultra-sensitive superconducting device (2 fT/√Hz) detecting faint non-EM and magnetic field shifts from biological tissue
Cortical Organoid Bio-Chip	Lab-grown human neural tissue in magnetically shielded room, acting as biological micro-receiver for subtle field coupling
Bio-Photonic Detector	Measures biological light emission changes during states of ultra-low internal noise (advanced meditators vs. controls)
Dark Matter Detector	Assesses whether biological tissue couples to dark-sector physical channels under standard shielding conditions

▸ EVIDENCE & WHY THIS MATTERS

Pre-conscious window	Libet 1983 (550ms readiness potential) & Haynes 2008 (7–10s pre-decision signal): brain knows before we do — Pashyanti arriving before Madhyama speech.
Parapsychology meta-data	STARGATE program: $p<10^{-20}$, d=0.33 across 20 years of remote viewing studies. Ganzfeld: $p<10^{-8}$, d=0.28 across hundreds of trials.
Fermi Paradox	Advanced civilisations may not broadcast primitive radio waves. They may communicate instantly across the non-EM Bhasha Vargana field.

▸ OPEN INVITATION TO COLLABORATE

We are opening an entirely new interdisciplinary field at the intersection of dark matter physics, neuroscience, and ancient Indian physical insights. We welcome research collaborators, experimentalists, and academic partners to test these frontiers together.

Jain insights have reached Nobel recognition before: Autophagy 2016, Circadian Biology 2017, Bose-Einstein condensates. Mycorrhizal plant consciousness follows the same pattern of dismissed-then-confirmed science.
