PACKETIZED INTELLIGENCE AND STRUCTURAL INTEGRITY ACROSS LIFE SPANS

The Digital Twin as a Boundary Case for Machine Consciousness

The Science of Consciousness 2026 | Poster #881 | Wednesday October 14 | Poster Session 2 | Philosophy
Kristin Raffaelle | Demosophy Think Tank | Scottsdale Arizona

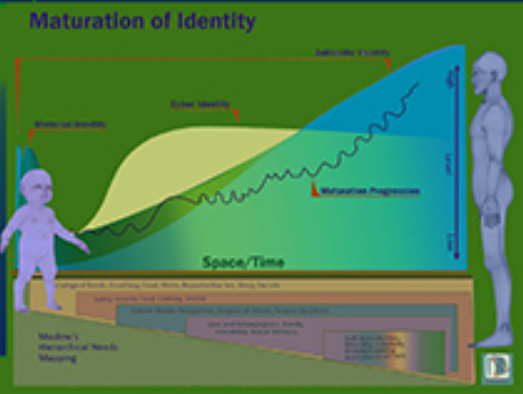

1) CORE PREMISE

The human is not the data. The twin is not the human. The twin can model the continuity without becoming conscious continuity.
The digital twin is not merely a clinical record or software proxy. It is an evolving digital manifestation of a human's lived relational existence A packetized, contextually, revisable representation of how a person is situated across biological, behavioral, environmental, social, informational, and temporal fields.

2) THE BOUNDARY

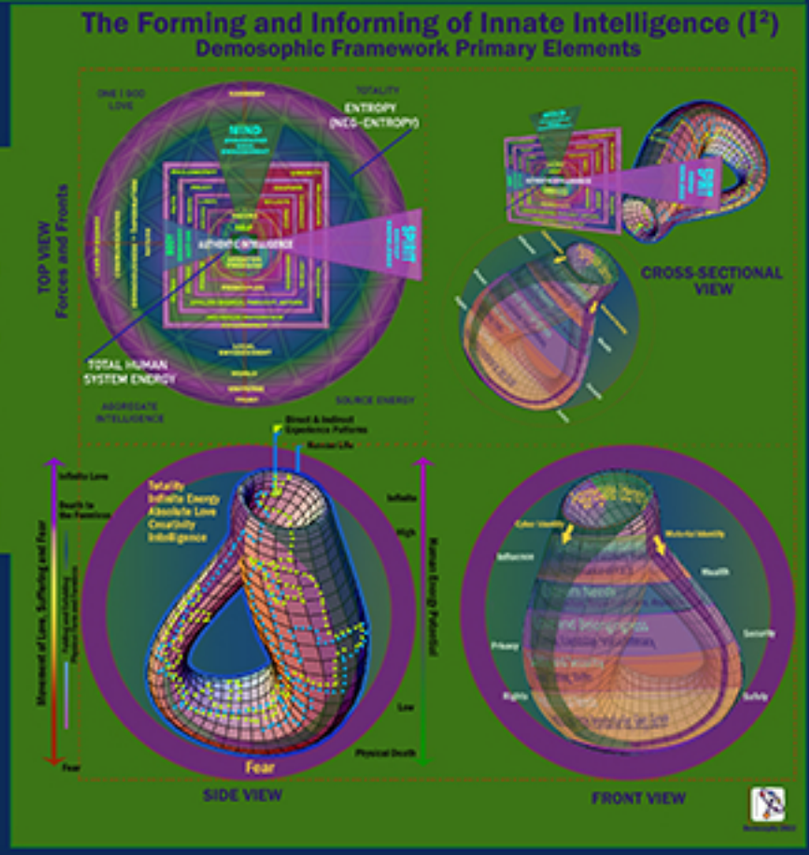

A consent-governed digital twin receives packets, compares prior states, and models trajectories. And returns context before action. Question: If portions of human continuity become digitally persistent, computationally interpretable, and recursively returned to the person, where do the functional boundaries of consciousness, agency, and identity reside?

a. Is the relevant unit the biological person?
b. The coupled human/digital system?
c. Or the integrity of the communication field through which it remains related?

3) THE DEMOSOPHIC FRAMEWORK INFORMATION ASSEMBLY

Connected and nested fields and nodes of two colliding bounded infinity manifestations (Klein Bottle(s)), contained within the Energy Totality and our relational existence. These assemble within the communications field that bounds information transfer and hence consciousness. This gives emergence to the Universal Coherence--bounded yes with limitless scale.

4) WHY PACKETIZATION MATTERS?

a. Packetization makes transport continuity portable.
b. A packet gains meaning through its source, receiver, and context.
c. Packets can serve both one and many.
d. At scale, packetization allows for selective interoperability without requiring collapse into one authority or database.
e. Trust, provenance, permissions and feedback are structural requirements.

5) LAYERED TWINNING IN A LIVING SYSTEM

The human twin is only one participant in a large living system. Because data flows, "twinning" can occur across persons, infrastructure, environments, institutions, nations, supply-demand economies inside a shared communication field. This made possible by packetization's granular discernible details and the potential of "feedback loops".

6) FROM ONE TO MANY

At scale, individually associated twins create a federated field in which living experience can inform aggregated intelligence and aggregated intelligence can return context to human agency

7) WORKING PROPOSITION

- Assembly requires communication. There is no assembly without communication.
- Coherence requires information. There is no coherence without information.
- Consciousness may emerge within, though, or adjacent to these fields, rather than residing only in the isolated biological organism.
- The digital twin extends relational continuity without being reducible to the human.
- The design challenge is to preserve individual integrity while allowing relevant intelligence to travel.
- Reality forms the field; the field informs the participants.

8) 89-SECOND DISCERNMENT WINDOW

The twin should widen the human interval between perception and action:
Perception -> context -> discernment -> decision. It may inform the future, but it must not silently author it.

9) MEMORY, POSSIBILITY, AND THE FUTURE

The twin does not preserve memory backward. It can also hold projected trajectories, anticipated states, risks, goals, and possible futures. A possible future once modeled and communicated, becomes part of the present relational field.

10) ASSEMBLY THEORY + PERSPECTIVE

Assembly Theory invites examination of how distinguishable elements become a coherent whole. The Demosophic question is what role energy, communications, information, and consciousness, play in that assembly.

A. Communication-First
1) Energy / Source
2) Communication
3) Information / Consciousness
4) Universe / Manifestation

A. Consciousness-First
1) Energy / Source
2) Consciousness
3) Communication
4) Universe / Manifestation
